

## Providing site investigation services to a wide range of clientele

### Why choose NCES Ltd?

NCES Ltd is a geotechnical engineering consultancy/contractor based in Essex and provides site and ground investigation services across the UK. We employ a wide variety of site investigation techniques from fieldwork and laboratory testing through to reporting to suit any size of project.

NCES Ltd can fulfil any project requirement. Whether it is to assist a developer with a planning application, assist with the sale or purchase of a piece of land or to provide foundation and earthwork design advice for civil engineering works, NCES Ltd is always happy to assist.

Having worked with some of the most top level contractors and clients within the industry, we are highly experienced in following stringent safety standards. NCES Ltd has the experience and technical knowledge to carry out comprehensive site investigation services for both previously developed Brownfield sites and ever more challenging Greenfield sites.

NCES Ltd can provide a complete site investigation service to a wide range of industries including:

- Local developers/private individuals
- Architects
- Planning consultants
- Loss adjusters
- Insurance companies
- Piling companies
- Civil engineering contractors
- Private sector organisations
- Public sector organisations
- Local authorities

We operate nationally out of our office based in Witham, Essex and extensively cover East Anglia, London & South East England.

To find out more about the services we offer, please visit our website at [www.ncesltd.co.uk](http://www.ncesltd.co.uk)

NCES Ltd can offer comprehensive geotechnical and geoenvironmental consultancy services for any size of project.

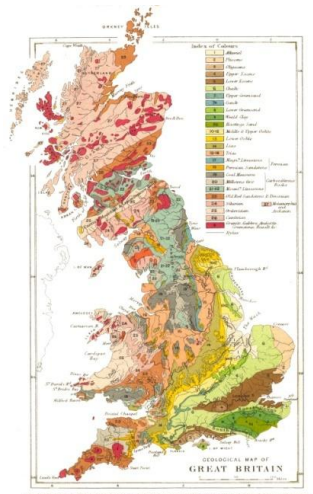

Our geotechnical consultancy services normally forms part of our complete site investigation service, but can provide stand alone advice where required. We can provide foundation and substructure design recommendations and slope stability analysis, all along with subsequent geotechnical design and reporting.

Our geoenvironmental consultancy services include identification and investigation of potentially contaminated land to include conceptual ground models, phased risk assessments and remedial method statements.

As part of our complete site investigation service we can undertake the following specialist activities:

- Machine & hand dug trial pitting
- Cable percussion boring
- Rotary core drilling
- Window sampling
- Dynamic probing
- Concrete coring
- Geotechnical and geoenvironmental laboratory testing
- Comprehensive geotechnical and geo-environmental reporting
- Gas, groundwater and specialist geotechnical instrumentation
